

MUHAMMAD USMAN JAVED

SOFTWARE ENGINEER

ranausmanjaved786@gmail.com | +92 304 0598985 | [linkedin.com/in/muhammad-usman-javed-muj78600](https://www.linkedin.com/in/muhammad-usman-javed-muj78600)

CAREER OBJECTIVE

Motivated Software Engineering graduate with a strong analytical mindset and a solid technical foundation in software architecture, web development, embedded systems, and game engineering. Demonstrates hands-on project experience in building cross-platform applications, hardware integrations, and intelligent AI models using C++, C#, Unity, and Arduino. Eager to leverage technical skills, software design principles, and collaborative problem-solving capabilities in an entry-level development role to build high-performance applications and contribute to real-world software engineering solutions.

EDUCATION

BS Software Engineering University of Science and Technology, Lahore CGPA: 3.3 / 4.0	2022 – 2026
Intermediate in Computer Science (ICS) Lahore, Pakistan Grade A	2020 – 2022

KEY PROJECTS

Morph Drive — 3D Endless Driving Game with AI Integration

- Architected and developed a full 3D endless driving game in Unity using C# targeted for Android and Windows platforms.
- Integrated an advanced **AI collision-risk prediction system** (leveraging ONNX and Unity Sentis runtime) to dynamically calculate real-time environmental hazard risks and alert the driver.
- Engineered vehicle handling mechanics, dynamic traffic generation, custom interactive UI, environmental weather states, and continuous high-score tracking logic.

Responsive Multi-Platform Web Application

- Designed and developed a fully responsive web application optimized for seamless user experiences across mobile, tablet, and desktop viewports.
- Utilized semantic HTML5, CSS3, flexbox/grid layout architectures, and media queries to ensure flexible UI layouts and fast loading times.

Arduino-Based Smart Fire & Smoke Detector

- Engineered an automated environmental detection unit combining microcontrollers, physical gas/smoke sensors, and thermal indicators.
- Programmed real-time alert triggers and threshold monitoring algorithms to deliver instant audio-visual warnings upon detecting dangerous conditions.

Digital Logic Design & Secure Login System

- Designed secure login system architectures using Boolean logic minimization, sequential circuits, state machines, and circuit simulation tools.

C++ Source Code Execution Utility

- Built a command-line developer utility applying Object-Oriented Programming (OOP) concepts in C++ for streamlined code execution and testing.

CERTIFICATIONS

Full-Stack Web Development Certification Professional IT Training Program	2026
---	------

SKILLS & COMPETENCIES

Programming Languages:	C++, C#, Python (Basic), C Scripting
Web Development:	HTML5, CSS3, Responsive Design, Flexbox/Grid, UI/UX Layouts
Game Dev & AI:	Unity Engine (3D/2D), C#, ONNX, Unity Sentis, Machine Learning Basics
Hardware & Systems:	Arduino Systems, Physical Sensors, Digital Logic Design (DLD)
Software Methodologies:	Object-Oriented Programming (OOP), SDLC, Technical Documentation
Soft Skills & Languages:	Problem Solving, Team Collaboration Urdu (Native), English (Intermediate)

AREAS OF INTEREST

Software Engineering • Web Application Architecture • Game Development • Embedded Systems • Artificial Intelligence • IoT Solutions
